Water Jetting Removal

Maintaining and monitoring your airport pavements : a key safety factor

SODI Water Jetting Removal intervenes throughout the project value chain in accordance with international requirements and best industry practices to guarantee the safety users :

- ▶ runway friction measurement
- ▶ high pressure water rubber removal
- ▶ markings removal
- ▶ degreasing aircraft stands
- ▶ complete traceability of waste
- ▶ pavement surface monitoring and diagnostics
- ▶ PCN calculation
- ▶ aircrafts admissibility verifications
- ▶ works recommendations
- ▶ technical appraisal for assessment of water-based rubber removal and adherence measurement processes
- ▶ training in the use of such processes, equipment and tools
- ▶ advice and guidance in the purchase and maintenance of adherence measuring instruments

A multi-lingual team and technical support :

SODI Water Jetting Removal by your side throughout the project

4 key stages

1 Rigorous upstream preparation

- ▶ prior contact of our experts with the client
- ▶ assessment and analysis of history of the surfaces conditions
- ▶ development of a customized solution

2 A professional process and quality monitoring

- ▶ resources (human and material) matching the physical and environmental restrictions
- ▶ quality control during all the operations
- ▶ work schedule adapted to flight and maintenance plans

Why choose SODI Water Jetting Removal as partner?

3

Personalized briefing

- ▶ on site for urgent responses
- ▶ suitable corrective measures proposed, if necessary

4

A post-intervention monitoring offer

- ▶ development of a maintenance plan
- ▶ consulting activities for organizing a maintenance programme with a clearly-defined budget
- ▶ advice in calculating and interpreting the results
